

Stereophile Demag Review

October 2006

“... Demagnetizing vinyl? Please. What next?....I didn't want them to work. I really didn't.”

“I am sorry to report that demagnetizing LPs works—consistently and decidedly. Nor am I the only one to hear it...”

"... demagnetizing an LP definitively removed a high-frequency glaze or glare and seemed to enrich the midband... Demagnetizing LPs works. Better yet, once a record has been demagnetized, it seems to stay that way... And do not try one of these devices unless you're prepared to buy it."
