

FURUTECH

Positive Feedback Online – Destat II

December 2011

The 8th Annual *Positive Feedback Online's* Writers' Choice Awards for 2011 - The Best of the Best!

Furutech deStat II

This baby flying saucer from Furutech is, by far and away, the best new accessory for audiophiles introduced in 2011. By bombarding any digital or analog media with negative and positive ions, it eliminates static on LPs and digititus in digital media way beyond its \$425 price tag would indicate. It even features sophisticated ergonomics that allow portability and multiple uses that indicate a mature mark two design. I would use it on my wife if she made music instead of dinner.

With a 10 second and twenty second blast setting, a convenient stable platform for CDs, SACDs, and all types of DVDs, plus easy one hand holding to blast LPs while turning on the turntable, it is a joy to use. The reduction in ticks and pops on LPs is fabulous. Its built-in rechargeable battery and light show are great and practical. I have never used a superior anti-static device in my 45 years as an audiophile.

Furutech has struck paydirt with the deStat II. I cannot find one knit to pick or quibble to mention. It works fantastically and perfectly every time you use it. You will know when you forgot to use it. The effect lasts about a day then blast again□ no harm no foul.

My advice is to buy it now before the price goes up. I would not wait for any mark 3, the mark 2 is all you need! Congratulations Furutech! The deStat II is a winner and more! Keep the hits coming!
